

Job Title: Project Manager
Location: Sunnyvale, California

Hiring Manager: Todd Young
Date: July 31, 2009

Job Description:

We are seeking an experienced Project Manager to manage the development and implementation process for Rosum's products and services focused on the delivery of new products and technology. This individual will monitor multiple concurrent projects from initiation through delivery, organize engineering activities, identify and ensure that adequate and appropriate resources are assigned to control the design, development and test schedule. This position will report to the VP of Business Development.

Primary Responsibilities:

- Manage multiple concurrent technical development projects for multiple global development partners and customers using a common engineering resource pool
- Working collaboratively with engineers and engineering management, identify and schedule project milestones, tasks and resources
- Manage development schedules based on a phase/gate process
- Forecast and track resource utilization and project costs
- Provide continuous feedback to Rosum management about project risks
- Manage project deliverables and schedules agreed to by Rosum and its partners
- Provide technical input to marketing during proposal phase of project
- Assist in the system specification development based on marketing requirements
- Manage the partner relationship to achieve project success and fastest time to market
- Schedule and facilitate design reviews ensuring proper attendees are included
- Identify and qualify potential hardware and software resources

Required Skills/Experience:

- Solid understanding of product management process, including phase/gate processes.
- Minimum three years experience in technical product development and management
- Experience with system design and architecture (Hardware / Software)
- Experience translating requirements into product specifications
- Experience working across multiple time zones
- Skilled in providing credible customer interface
- Experience with designing hardware for manufacturability, testability, etc.
- Proven leadership capabilities
- BSEE, or related degree

Ideal Candidate:

- Deep process knowledge developed at large company, successfully applied at start-ups
- Six years experience in Project Management in embedded systems for Telecom or LBS
- Six years experience in Technical Product Development for Telecom or LBS
- PDMA Certification
- MSEE or related degree
- Knowledge of positioning technologies and location-based services

Terms:

Full-time permanent employment. Compensation commensurate with experience and fit.
